Task 2 — Multimodal GeoAI & Land Document Intelligence

- FarmwiseAI will provide land documents for the designated parcel/area.
- FarmwiseAI will provide available cadastral/survey map data, including survey/parcel information.
- Basic GIS reference layers will be provided for the study area, such as roads, water bodies, administrative boundaries, and other relevant geographic layers available with FarmwiseAI.
- Participants are also expected to incorporate relevant **raster datasets** into their analysis, such as **DEM, slope, elevation, and other terrain-related layers** as required by their solution.
- **Raster datasets are not provided by FarmwiseAI. Participants are responsible for identifying, downloading, preprocessing, and integrating the required raster datasets from appropriate publicly available sources.**
- These resources are the starting reference set. Participants are responsible for OCR, information extraction, document-to-parcel/survey matching, spatial analysis, raster-based analysis, discrepancy detection, and developing the final application/dashboard.

📂 Dataset Access

- **Geospatial Datasets:** All spatial datasets provided by FarmwiseAI are available in the **Geospatial_Layer** folder.
- **Land Documents:** All land-related documents are available in the **Land_documents** folder.

Expected Outcome: Land Intelligence / GIS Platform
