Task 5 — Street View Urban Intelligence

- FarmwiseAI will provide a **designated study area/boundary** for the challenge.
- Participants are required to **select a study area covering approximately 10 streets within the provided boundary** for detailed Street View analysis.
- The selected area must provide a **minimum road/street coverage of 2 km** and should **not be less than 2 km** in total coverage.
- The selected area should include a **mix of residential and commercial areas** to ensure diverse street-level analysis.
- Participants are responsible for carrying out the Street View analysis within their selected area using approved/authorized access methods and permitted public data sources.
- The analysis should cover comprehensive **street-level urban intelligence** and should not be limited to determining whether a building is commercial or residential.
- The analysis may include, but is not limited to:
    - Buildings and property characteristics
    - Traffic signals
    - Electric poles
    - Streetlights
    - Utility infrastructure
    - Road features
    - Signboards and signage
    - Other visible urban assets
- Participants are responsible for selecting appropriate Street View imagery/views, developing the required detection/OCR methods, performing geospatial association, integrating relevant data, and presenting the resulting intelligence.
